**Subject:** Mom's results

Hi!! Now going on 1:45 pm - the clinic nurse just called with mom's results -  
Her CA125 test results have to come in under 30 to be good....  
GUESS WHAT!!!!

The results are 18 !!! I am soooooooooo happy!!!!!! So they definitely wont be doing any chemo in the next  
while - so Mom's next checkup will be November 8<sup>th</sup> at 11:15

PRAISE GOD!!!!!!

I HAVE BEEN TRYING TO REACH MOM WITH GOOD NEWS BUT SHE IS NOT ANSWERIN RIGHT NOW SO I  
WILL KEEP TRYING

S.R. BURZYNSKI

January 14, 2005

**RE: VAN STEELANT, JEANNETTE Y.**

To Whom It May Concern:

We have had the pleasure of seeing Jeannette Van Steelant in our clinic from January 5, 2005 through January 14, 2005 for treatment of recurrent carcinoma of the Ovary. The patient had a total hysterectomy and is now relapsing in the ovaries as well as omental implants. She is postoperative and needs restaging. She is on combination therapy with sodium phenylbutyrate, Avastin, topotecan as well as hormonal blockade. She will either have a PET scan or CTs. The patient was admitted for administration of sodium phenylbutyrate. Please see the enclosed Discharge Summary for details regarding her treatment course.

Thank you very much for your participation in the care of this patient. If you have any questions or concerns, please do not hesitate to contact our office at (713) 335-5697.

Sincerely,

Robert Ira Lewy, M.D., F.A.C.P.

# S.R. BURZYNSKI

January 14, 2005

Dear Mrs. Van Steelant:

As you are about to leave the clinic and return home where you will continue your treatment, I want to remind you of a number of very important things that need to be done when you get home.

1. Continue to take your medication as prescribed and as reviewed with you today by the nurses.
2. Please be sure to have your laboratory tests done regularly and at the intervals prescribed on the separate follow-up laboratory order sheet.
3. Please be sure to have your follow-up scans done at the times recommended on the separate follow-up scan/x-ray order sheet and please be sure to have the facility that does your scans send us both a written report and the actual films for our review. I strongly recommend that you consider sending the films via a traceable carrier such as FedEx.
4. If you have any questions or concerns please do not hesitate to call one of the staff at the clinic.
5. Please be sure to allow at least one week for re-ordering medications from the clinic to allow ample processing and shipping time.
6. You will need to arrange a follow-up visit with our clinic in three months' time.

Have a pleasant and safe trip home.

Sincerely yours,

Robert Ira Lewy, M.D., F.A.C.P.

**To:** Lynda  
**Cc:** Lynda TPR - Work Staub  
**Subject:** Re: Dr. Cashmere's Call

Hi Lynda,

Good news, sounds like this Dr. Harris is very co-operative.

Re the Avastin - what can happen is the Clinic can give her the next dosage when Mom goes down, as well as the Lupron, that way at least she can continue best as she can on the program as it does inhibit growth to the cancer cell and we want Mom to get the best chance possible to get over this once and for all....especially as they are already "testing" it in Winnipeg and will probably open their doors to it down the road..... The Clinic is just further advanced than they are and they like to work the combination as that is what they have found works more effectively in the treatment, so like to give them the best chance possible with their program.

What did Dr. Harris say about the Burzynski Clinic - is she familiar with them and does she seem to be more open than Krepart/Heywood?

What is Robert's airmiles #? That I did not get from him, need to wait two weeks to use AirMiles, that's how long it takes, will follow up on it though.

Thanks!

Marlene

Sending an ICS envelope tomorrow - you should have on Friday....

**Subject:** Re: Dr. Cashmere's Call

Hi Marlene:

Dr. Harris will do all she can from here but Avastin is totally out of the question - no doctor in Canada is allowed to prescribe or administer it even if it is shipped in from USA

Mom starts her topotecan Monday at 1:45 and everyday next week - 5 days straight - and out by 3:30 or so everyday

Dr. Harris will fax all blood tests etc to Burzinski. She examined and did full blood tests, ca125 and EKG today on Mom so Mom is ready to go on Monday.

Robert says 17th to fly out is good - stay monday & tuesday and back on Wednesday but... he is hoping you can use his airmiles - he has 10,000 he said. any chance of this.. also - is it possible to insure the flight in case Mom does very well with medication -- could it be that they

# Houston Medical Imaging

You have been scheduled for a PET scan on:

Date: 11/6/05 Time: 8 A.M.

\*Please be on time. This is critical to the successful completion of your exam and accurate diagnosis\*\*

The procedure performed will be a:  Whole Body  Brain  Cardiac Study.

Please Follow these instructions closely:

The room is kept at 60°, so wear warm, loose fitting clothing (e.g. sweats, flannel shirt). It will not be necessary for you to remove any clothing for the scan. Jewelry/Make-up is not an issue, so you should do what makes you comfortable.

## BRAIN:

**No food** or liquid for a minimum of **4 hours** prior to arrival for your PET exam.

Allow 2.5 hours for the exam.

May take regular medications as long as they are tolerated on an empty stomach

Oral insulin dependent diabetics should hold off on insulin until after the scan

Subcutaneous insulin dependent diabetics should have their last injection 2 hours prior to exam

## ONCOLOGY (Whole Body)

**No food** or liquid for a minimum of **4 hours** prior to arrival for your PET exam.

Allow 3.5 hours for the exam

You may take regular medications as long as they are tolerated on an empty stomach

Oral insulin dependent diabetics should hold off on insulin until after scan

Subcutaneous insulin dependent diabetics should have their last injection 2 hours prior to exam

## CARDIAC VIABILITY

Patients must eat a full meal 30 minutes before scan. Meal should be high in carbohydrates, protein, and sugar.

**Breakfast:** Pancakes, waffles with syrup, coffee with sugar and juice

**Lunch:** Pasta with meatballs, pizza or rice with vegetables plus dessert.

Allow 3-4 hours for exam

Diabetic patients should stay on their regular regime

Due to resting requirements, diuretic meds and oral fluids should be limited to small quantities

Please Call the Imaging Center if:

You have ANY questions prior to your arrival,

You are Diabetic,

You are or think you may be pregnant

8:00 AM PICKUP AT HOTEL

9:00 AM TESTING \$2,010.00

PAID \$5,000 FOR  
P.E.T.

Pet scan confirmed only one  
spot, ovaries.

PERSONAL PLANNING BY JADE HEMERON

## Canadians turn to PET scans for health picture

But access to this cutting-edge technology is limited

**C**ANADIANS CONCERNED about the state of their health are increasingly turning to what is considered the cutting edge in diagnostic testing — the PET scan — even though they probably will be paying for the expensive test out of their own pockets.

PET stands for "positron emission tomography," and the scans are used for early detection and measurement of cancers, heart disease and neurological disorders relating to epilepsy and Alzheimer's, Huntington's and Parkinson's. PET scans can often detect cancers and other problems before they are evident through other tests, and can give physicians valuable information that can be used to decide on appropriate treatments. PET scans, which take about two hours to perform, often can spare patients painful, invasive tests and exploratory surgeries, and can determine the extent of a disease or whether cancer has spread to other parts of the body after treatment.

A scan is able to inspect most organs of the body in a single examination, replacing multiple tests.

"The PET scan is the gold standard for cancer detection and staging," says Zoltan Nagy, Vancouver-based director of the Canadian Medical Clinics Association. "It is particularly valuable in evaluating cancer of the colon, rectum and breast, and lymphoma and melanoma."

Despite the benefits of PET scans, Nagy says, Canada is "light years" behind other countries in availability. British Columbia and Quebec are the only provinces in which patients can obtain financial assistance through provincial health programs to pay for the scans, although there are usually long waiting lists in the public system. In Ontario, the government is conducting a clinical trial program on the efficacy of PET scans; availability is restricted to patients with relatively advanced cancers of specific types, including lung, melanoma, lymphoma, colorectal and breast. There are long lineups for the few publicly accessible machines. In the other provinces, PET

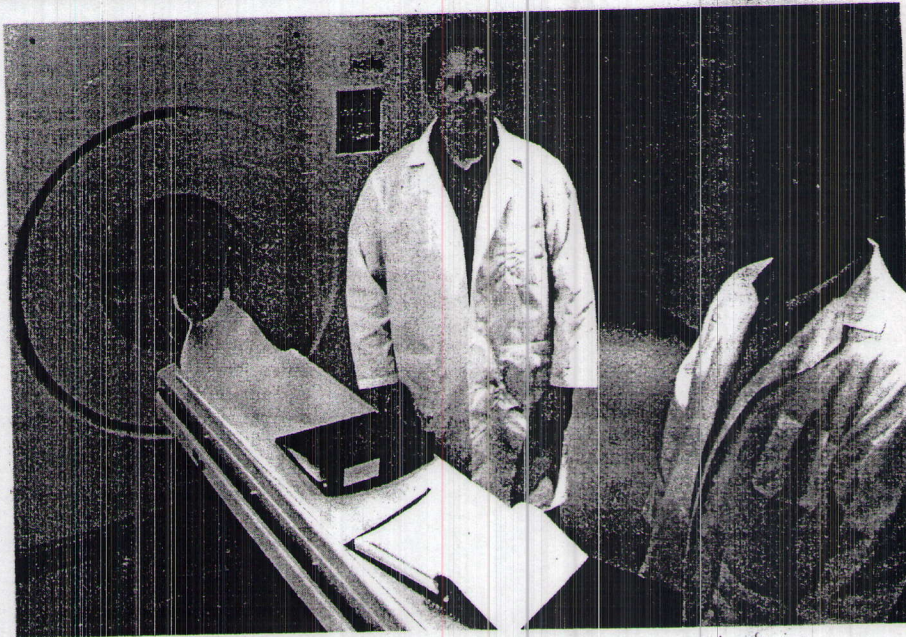

scans aren't available, although people are traveling to out-of-province clinics for the scans.

There are four private PET scan clinics in Canada — one in Vancouver, another in Mississauga, Ont., and two in Montreal. Rather than navigating the public health system, many Canadians are taking their health care into their own hands by paying the \$2,300-\$3,000 cost of a scan at a private clinic. They may receive tax credits when they file their income tax returns, as the scan is an eligible expense for the medical tax credit, and those fortunate enough to have a generous private health-care plan may be reimbursed. Most private clinics require a doctor's referral before they will scan a patient.

Snowbirds who winter abroad frequently obtain PET scans in states such as Florida, Arizona or Texas, says Grant Fairley, marketing director of VIP Docs Inc. of Burlington, Ont. VIP Docs helps Canadians connect with doctors and other suppliers of private health care, both inside and outside Canada. Fairley says demand for PET scans has increased every year since the company opened in 1999, but adds that many doctors in Canada are still not familiar with the scan, even though it's widely used in the U.S. and Europe.

There are more than 750 PET scanners in use internationally, with most of these in the U.S., where about one million PET scans are performed annually. For the cost of a vacation, Canadians usually can obtain a scan at a private clinic within 48 hours in Canada or the U.S., and get results within one or two days, Fairley says. Once they know the nature and severity of their disease, they can make informed decisions on treatment.

"Ideally, I would like to see Canadians accessing treatments through the health-care system, but there is a severe shortage of 'doctor minutes' available in this country," Fairley says. "A Canadian who pays to go to a private clinic in the U.S. or Canada is making room for someone else in Canada's public health care system, so it's win-win."

Brian Moss (left) and David Olinoski display a PET scan machine at CareImaging, a private clinic in Mississauga, Ont. Olinoski does not expect PET scans to be publicly funded in Ontario before 20

In many cases, Canadian doctors fail to inform patients about the technology, says Brian Moss, who is in charge of sales and marketing at CareImaging, a private clinic in Mississauga that offers PET scans. He says the Ontario government is creating life-threatening delays with its research trials and inefficiencies with its narrow definition of who currently qualifies for the scans. Some observers speculate the lengthy clinical trials could be a stalling tactic to avoid investing in the costly technology.

"A lot of people could benefit, but they don't meet the strict criteria the government has established to obtain a scan in this province," says Moss. "We are prevented from advertising to let people know the scans are available on a private

basis, even though world data shows PET scans are standard procedure for cancer patients in the U.S. There have been cases in which U.S. doctors have been sued for malpractice for failure to recommend a PET scan."

David Olinoski, president of CareImaging, says the PET scan is more diagnostically accurate than magnetic resonance imaging (MRI), CAT scans or ultrasound tests, which can detect an unusual mass but can't tell if a tumour is malignant or growing, except by obtaining another image at a later stage and comparing the dimensions of the mass. A PET scan can measure metabolic activity, and can uncover abnormalities in organ and tissue function, as well as in blood flow.

The patient is injected intra-

venously with a small amount of sugar water containing radioactive material. The sugar is distributed throughout the body. The PET scanner records signals emitted from diseased sites, and consumes the sugar at an abnormal rate. A computer reconstructs the signals into three-dimensional images of the body and then a medicine physician analyzes the image. Physicians then can see the next stage of treatment.

Olinoski says 65% of patients receiving PET scans in the U.S. had their treatment adjusted according to the data revealed by the scan. He does not expect PET to be financed by Ontario's health system until at least 2011, he says, there will have been unnecessary deaths.

## FINDING VIP CARE IN NORTH AMERICA

VIP Docs Inc. is a service that helps Canadians find doctors and services outside the provincial health-care system, either in Canada or internationally.

"There is a finite number of doctor minutes available in any city, state or country, and doctor minutes are the most valuable commodity in health care," says Grant Fairley, marketing director of VIP Docs, which has offices in Burlington and Windsor, Ont., and helps individuals and firms

find solutions to health-care needs.

He says the PET scan is most commonly sought out by people with cancer "who want to find out what's going on right away." VIP also helps people looking for other services, such as elective hip or knee replacements, and can help them avoid lengthy waits in the public system — if they are willing to pay for private care.

For those who want a PET scan immediately but don't have the cash handy, the funds often can be bor-

rowed. Toronto-based Medic Finance Inc. offers unsecured financing for medical, dental and veterinary procedures and products, with interest rates starting at 9.95%, depending on the applicant's credit rating.

Medicaid president Ann K. says demand for diagnostic procedures such as PET scans is growing at a rate of about 10% a year. Applications can be submitted and approved in 20 minutes.

**Subject:** MomVan

Hi Mars:

The agenda mom has right now I though you had given her - you were stapling appointments slips, etc inside but of course it expired end of december

I started Mom on drinking chlorophyll in her water, tea over a year ago - recommended by herbalists.

Mom AND Robert are both hoping to go for pet scan on March 31 or soon thereafter - april is ok if need be but in May they are too busy in the fields. I told robert to get a referral from his doctor in winnipeg - they have an appointment coming up

Dad met me after work on friday and called aunt peggy to join us - he couldnt stop talking about his birthday - picture in paper (when he was early 20's) and cake at elie manor on thursday night - they were kidding ralph as to why he never got a cake make from b.c. for his birthday so they all had a good time will try and send u pictures of mom in new wig

also marlene - I finally was able to join up with Usana Nutritional products so I can now order, etc for Mom and Robert and for Claire - I will also get michelle and krysta on the product - I have read alot about it and it is an excellent product. Uncle Ernest's son, George and his wife are the ones that introduced us to the product. They have been in the business over 3 years and they are very very successful - I want to start with the product first and then introduce people to the business plan after I am comfortable with product - Carla is a nurse at St. Boniface and has cut back her hours at the hospital as she is very busy with Usana. I will send you some info. But I will need your help in how to do a tax return at the end of the year - For now I will keep all my receipts and travel log to meetings, etc. Nice thing is once a customer agrees to go on product they go on autoship and their product arrives automatically every month by mail on the mastercard of direct debit so I have no delivering which is great.

January 27, 2005  
Sanoviv Medical Institute  
Fax: 801 - 954-7666  
Baja California, Mexico

Dear Doctors:

My mother was initially diagnosed with ovarian cancer in September, 2003. She started faking chemotherapy treatment in October, 2003 and took 6 treatments. They ended on February 9, 2004. She was monitored with a CA125 test and cancer reoccurred in November, 2004. She had a full hysterectomy on December 13, 2004. The doctors recommended more treatment with the same chemo drugs, taxil and carboplatin. They have since decided they would like to treat her with caelyx with is another type of chemo. because we have already lost a sister at 29 years of age from breast cancer (a mother of 3 young children) we have discouraged our mother from taking any more chemo.

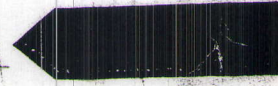

My sister took my Mom to the Burzynski Clinic in Houston Texas on January 4, 2005 to see if they could help her. She received Avastin, Hycamtin, Lupron and returned home.

She is taking 30 tablets per day of sodium phenylbutrate and also 10 pills per day of aminocare. Unfortunately we cannot continue with the avastin, hycamtin or lupron in Winnipeg as we cannot find a doctor willing to prescribe it. Also Avastin is a study drug for colorectal cancer in Winnipeg at this present time and not available at all to any ovarian cancer patients. We urgently need your advice on the above drugs as to whether my mother should continue trying to obtain this medication - if she should go back to the Burzynski clinic to receive these drugs. Would you please be so kind as to call me, her daughter, Lynda Staub directly at work at Winnipeg 1-204-945-0117 as soon as you get this information - or if you want to call me Saturday morning at home at 1-204-633-4345. I would greatly appreciate your advice. She has a wonderful new husband, married on July 29, 2000 and still have 8 surviving children and we all want desperately for our mother to get better. I would be happy to encourage her to attend Sanoviv if you think you can help her or if you think the medication she is on will not help her. Presently - the pet scan at Burzynski clinic has shown 2 cancer spots on her bowel and right pelvis area - this was confirmed with the operation on Dec 13, 2004. Thank you so very, very much for your help. I anxiously await your call.

Sincerely,

Lynda Staub work 1-204-945-0117

**Subject:** Mom

Hi Helene: thank you for the Cytology & Operative Report - Dr. Harris works ½ days at the Grace Hospital, Monday, Wednesday & Thursday - I will get those reports over to her office later today.

Sanoviv called me back and the Specific Transfer Procedure is not as expensive as I had thought - I expected a lot more but she

Quoted me \$1,700.00 per procedure - but we don't know how many Mom would need if she goes there

Claire brought Mom to the Medical Arts TRrainor Lab today for blood tests and then on to her massage therapy.

Claire also brought Mom some glyconutrients. I reviewed the information - Audio Cd and VCR and because it is a food

Product I don't think it would do any harm for Mom to be on this.

Although expensive (\$100.00) per month - Claire gave one container to Mom but because Mom needs to work up to 3 TBSP

Per day she will need to get more for Mom - I think it is worth a try - I met Cheryl at the meeting and her mom was sent home with

Pancreatic cancer and no hope but her Mom is back on her feet.

Marlene: for your information - here is Dr. Patricia Harris, Oncologist address, phone, etc.

Dr. Patricia Harris  
Oncologist  
Grace Hospital  
Cancer Care  
300 Booth Drive  
Winnipeg Manitoba  
R3J 3M7

Phone #1-204-837-0246 Fax #1-204-837-0456

She works out of different areas and is at the Grace Hospital the following days:

Monday Morning  
Wednesday Morning  
Thursday Afternoon

She called me Saturday morning and said Mom could come in on Feb 16 -

Marlene - Did you order the Amino and other pills for Mom to be sent to my office - do you know what day they are coming?

Bye for Now Love Lynn

**Subject:** CA125

Hi Marlene: Mom's Results for CA125 were 138!!!  
it was close to 500 at Xmas and the normal reading  
is under 35 so we are heading in the right direction!

Marlene:

I am at home today for another hour or so then running out.  
I will be at office tomorrow so email me there and at  
mts.net

Questions:

Because readings are good -

1) Do you think Berzinski would recommend taking the  
next topotecan? Via IV? (or skip) if yes - continue we will need the prescription faxed to me asap so I will forward it  
on to Dr. Harris so she can schedule mom for it.

2) Do you think Berzinski would omit the Avistin especially because of the cost of getting it shipped and also  
the hassle of getting it administered here?

3) Do you think Berzinski might just say continue with  
amino acids and other pills and wait for the next CA125  
results in another month?

I will watch for your reply.

Thanks for all your prayers - now we must send thank you prayers!!!

Love Lynn

2) Do you

TREATMENT  
AT BURZYNSKI, TEXAS  
CLINIC COMMENCED  
JAN. 5/2005

Hi Everyone:

Just a short note about Mom's latest results.

Her CA125 Tumour Marker was highest in September 2003 at 1120 (normal is  
35 lowest was August, 2004 at 18

It started to climb again in Nov 2004 and climbed to close to 500 at Xmas.

Mom's reading today is 138 so that is wonderful! She's on the right track  
but a ways to go yet.

To follow with the treatment with Burzinski clinic

COUNT  
138!

Marlene Legare, CFP

The lowest was August, 2004 at 18

It started to climb again in Nov 2004 and climbed to close to 500 at Xmas.

Mom's reading today is 138 so that is wonderful!! She's on the right track  
but a ways to go yet.

To follow with the treatment with Burzinski clinic we may have to switch  
doctors because her specialist refuses to follow the Burzinski treatment -  
meeting with new doctor next week and hopefully she will agree to help  
where she can. That's all for now.

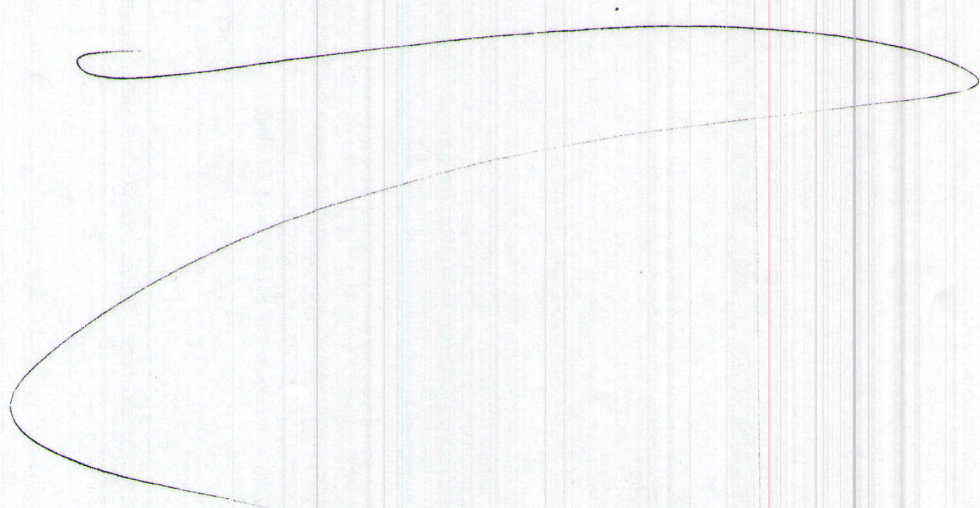

Hope everyone is doing well. Still in my new Document Examiner Position  
(Training) - lots to study but really enjoying it.

Take care.. PS - Sheila - Jerry - Mom was happy to get the flowers you  
sent. Thank You!

Love Lynn

SHE THINKS  
NO ONE CAN READ THROUGH  
HER BULLSHIT!  
WRONG!

**Subject:** Re: Dr. Cashmere's Call

Hi Lynda,

Good news, sounds like this Dr. Harris is very co-operative.

Re the Avastin - what can happen is the Clinic can give her the next dosage when Mom goes down, as well as the Lupron, that way at least she can continue best as she can on the program as it does inhibit growth to the cancer cell and we want Mom to get the best chance possible to get over this once and for all....especially as they are already "testing" it in Winnipeg and will probably open their doors to it down the road..... The Clinic is just further advanced than they are and they like to work the combination as that is what they have found works more effectively in the treatment, so like to give them the best chance possible with their program.

What did Dr. Harris say about the Burzynski Clinic - is she familiar with them and does she seem to be more open than Krepart/Heywood?

What is Robert's airmiles #? That I did not get from him, need to wait two weeks to use AirMiles, that's how long it takes, will follow up on it though.

Thanks!

Marlene

Sending an ICS envelope tomorrow - you should have on Friday....

**Subject:** Re: Dr. Cashmere's Call

Hi Marlene:

Dr. Harris will do all she can from here but Avastin is totally out of the question - no doctor in Canada is allowed to prescribe or administer it even if it is shipped in from USA

Mom starts her topotecan Monday at 1:45 and everyday next week - 5 days straight - and out by 3:30 or so everyday

Dr. Harris will fax all blood tests etc to Burzinski. She examined and did full blood tests, ca125 and EKG today on Mom so Mom is ready to go on Monday.

Robert says 17th to fly out is good - stay monday & tuesday and back on Wednesday but... he is hoping you can use his airmiles - he has 10,000 he said. any chance of this.. also - is it possible to insure the flight in case Mom does very well with medication -- could it be that they

dont have to go down at all in April? If it is booked and insured maybe they can cancel and not be out of pocket??

Can you find out if they can fly to Houston on Air Miles  
or can they fly to Calgary on Airmiles and same on money  
that way?

Mom and Robert both happy things went well today.

I will be at work tomorrow - you can email me there tomorrow as well as [Istaub @mts.net](mailto:Istaub@mts.net) just in case we miss each other.

love lynn

Hi Lynda,

No I have not received anything - maybe Mom is not sure how to work the machine....  
Also what would you like me to report to Dr. Kabove and she would like a weekly update.  
What medications is Mom taking, including Tylenol or other??

Marlene

Hi Marlene - The count when Mom went down was 172 -  
We talked to Cashmere about this - told him CT report was good but CA was high -  
I talked to him personally and asked if Mom should come down.  
He said yes - important that followup appointment be kept

**Subject:** Progress Note on Ms. Van Steelant

Dear Ms. Legare,

I was hoping to obtain some information on your mom's condition. I know that by now she should have had 2 cycles of Carboplatin and Taxol. Is her oncologist planning repeat scans after 3 cycles or just following tumor markers? I would appreciate letting me know, perhaps faxing, her last blood tests. I have suggested that Ms. Van Steeland discusses use of Megace or Marinol to improve her appetite and indirectly increase the calorie intake. She would tolerate the chemotherapy much better. Also increasing the dose of Aminocare may reduce the side effects of chemo.

Looking forward hearing from you.

Respectfully,

Eva Nagy-Kubove

Lynda was supposed to advise Burzynski  
clinic of mom's condition weekly - this did not  
happen according to Shirley at Burzynski. Why?  
Lynda wanted to push Usana instead!

Hi Marlene

- Great News
- Mom's Reading is down to 50!!
- No Chemo for now
- Next Appointment is in 2 mths

Hope all is going good in your new place

Love Lynn

I called Lynn  
+ Mom at 4:30pm  
to say some thing  
was missing  
the pills for  
the surgery.

The program was  
working - why  
quit in the  
surgery. I mean  
the same time?

 Subject: Mom's CA

Hi everyone - Mom had another session of chemo today - Her CA125 has gone down from 2017 I believe to today's reading of 945 - so that is very good news!

She is being monitored weekly with blood tests. Also - Derek is still in the hospital until swelling is down and until they determine if he needs more surgery

bye now . Love Lynn

so why stop the  
Burzyrski pills  
when proof it is  
WORKING?

Oct. 18/05

Hi Marlene

- Great News!
- Mom's Reading is down to 50!!
- No Chemo for now
- Next Appointment is in 2 MONTHS!

Hope all is going good in your new place.

Love you  
~

I CALLED LYNDIA & MOM AT CHRISTMAS TO SAY SOMETHING WAS MISSING - THE PILLS P.P.!! STOPPED.

The Program was working - why quit mid-stream so cancer can come back?

Subject: VERY IMPORTANT - MOM!!!!

**Got a call TWICE - VERY, VERY, VERY IMPORTANT!**

**YOU MUST ENSURE THE FOLLOWING FOR MOM** - this is **very, very serious** - don't take this lightly! Even though everything appears good now, it could turn around quickly, and not for the

best, if Mom does not maintain her proper diet. Remember how she was initially? That wasn't good was it? Do you want her to go

back thru that again? And it could happen just as quickly if Mom does not pay strict attention to her diet as she can prevent a

recurrence - even if she thinks she is out of the woods - that is not the case!..It is lifetime commitment and she has to nourish her

body properly. Again, I have not had two calls lately for nothing. By very reliable sources, this was brought to their attention

when mentioning Mom and they have never been known to be wrong when praying about people! So you need to find out what

Mom is eating, *everything*. Her body needs to stay ALKALINE as no cancer can survive in the environment, it if it at all **acidic**

the cancer will grow.... In order to stop that she must juice, and juice all the right vegetables, refer to the health books, but mostly

greens and not just one kind. Pull out her books and read it to Mom as there is nothing more important at this stage than getting

the message to her. Never mind that it might be a little work to juice, there is no excuse if your life is on the line

and hers is.....

What is Mom eating? Can you email me what she she eats daily?

Something is being overlooked --- most likely in her diet....

How much juicing is Mom doing? It is felt this could be the KEY - is she getting her carrots as well in her juice?

Read Lorraine Day book - she is a doctor and she said she would be dead today if she had not JUICED!~!!!

Kevin Trudeau says the same thing in his book as well as many other books.

You need to take action now so that you don't ever regret not heeding this message as I also want the best for Mom

and am not around to "check" what she is doing/eating, can only pray from this end along with others and this has

come up several times that something is being missed.....that could ensure she does live a long, long time yet.....

So put your "detective hat" on again and treat this very seriously, as it is a life or death matter and I would be lieing

if I did not say that, or tried to prevent something that could have been taken care of it I had said something sooner.....

Juicing, it is felt, could very well be the missing key here, please look into it for all of us.....

Found out only in May/2006 That Mom  
Stopped her pills/treatment from  
Burzynski Clinic - told Lynda something  
was wrong - now I know. Why did Lynda  
hide truth from me + encouraged Mom  
to do the same? To take her to Mexico?  
To spend \$11111. At a cost?

1-604-7615630

December 19<sup>th</sup>, 2005.12.19

Hi Marlene: Just a short note to say that all is well with Mom - her last checkup on Dec 12<sup>th</sup> as good - CA went up a little from 50 to 79 but Dr. Harris said not to worry.

**NEXT APPT is FOR MARCH.**

Claire is settled in her house 3 miles south of Teulon but of course - there is no settlement to be seen!

Derek is recovering from car accident but still not working - but he can hold Aiden now.

Alissa and Paul are engaged to be married on October 7<sup>th</sup> next year.

Dad had a bad fall on Friday - when he stepped out of church from a funeral - lost consciousness and ambulance took him to Grace hospital - very bad cut - stitched up and observed 24 hrs - ct scan 2 x and he was let go - hopefully all will be fine with him.

Have a great Christmas - everyone will be at my house Xmas Day at 5 if you want to call  
Sent you a xmas card - hope you got it...

Love Lynn-

→ Should have gotten back On Houston treatment!

Hello – hope all is going well.  
This is just a suggestion – don't feel obligated because I am already going ahead with it but I thought you may want to join me and add your name to the card.  
If you don't – simply delete this email at this point.

At Sanoviv Medical Institute one of the treatments Mom received was hyperthermia – raising body temp to 107 degrees because cancer cells stop multiplying when body reaches this temp. It is done with Infrared light which penetrates into the body.

I have located an Infrared Light House (like a gift box) – You sit inside with head and arms out.

It is rather expensive but never mind about the price because I have decided on it already.  
If you want me to put your name on the card and if you want to contribute in any way (any amount) that would be great – if not – that's ok.

I will be giving it to Mom soon as an early Mother's Day gift from anyone who responds.

Thanks

Love Lyn

---

1. Shirley, this is misinformation that was relayed to my mother which caused her to stop taking her medication.
2. At this moment, I am in Vancouver, and have been advised that my mother will not be coming out of the hospital where she has been over a month.
3. May I impose on you in reading these faxes sent to me by my sister Lynda Staub who is associated with Usana and has taken mom down to Sanivov for three weeks this past May, all the while discouraging her from continuing treatment at your clinic based on this misinformation. She has since lost at least 30 pounds and is very sore in the stomach area, with fluid build-up.
4. I am pleading for Mom's life and her return to the Burzynski Clinic, possibly a call from Dr. Burzynski himself directly to Mom through the nurses station at 204-467-8424 as Mom has been instructed not to answer the telephone in her room.
5. Without the clinics intervention and possibly a call to Robert Van Steelant at 204-633-3208, I fear Mom will not be with us much longer.
6. Respectfully submitted,

**Marlene Legare**  
Vancouver, B.C.

Oct. 16/2006

Jeannette Van Steclant,

As per my previous letter to you  
this spring, this is further confirmation  
that I renounce my rights as your  
daughter and will have nothing to  
do with your estate, financially  
or otherwise, irrevocably as my primary  
concern has always been & will always  
be to your health & well-being as a  
dutiful daughter, according to the "Bible"  
of which I firmly believe & honour the  
commandment "honour thy father and  
thy mother" and this is my belief  
& stand as I love you both so very  
dearly and want you both to love  
a long and healthy life.

Love always,  
Marlene Legaré

4. 23/2006

Joannette Van Steelant  
Lionel Zouchard

would be informed (for the third time) in recent  
months, that I waive all rights to estate  
inheritance by virtue of being your daughter.  
It has always been + always be my desire  
to see you both live a long and healthy life.

all my love,

Marlene Régarié
